Abstract: The online Ayurvedic and General Product shop website that helps admin to manage the shop more effectively and easily by online ordering, billing and inventory control, in our project we show a different Ayurvedic and general product. This is developed for handled day to day product orders of shop very fast and easily within less time. Customer can order product online and get the delivery at home. In our website, the product shows with two categories. Each category items have a name, price and volume of product. In today's generation all things are based on internet and all developed countries system and website is goes with internet.

Customer feedback will increase the quality and quantity of the shop. Hence the helps admin to receive response from users.

Key Word: Shop website, Order place, Feedback, Database..

I. INTRODUCTION

The Shop website is a web application used online inefficient manner. Shop website is used to save time, manage shop quickly in less time and also manage shop effectively by using online ordering and billing. As in this website login form will be available for the customers and feedback form is also available. On this generation, the present time is based all on the internet. In all developed countries every system and website are goes with internet. Our website is to work like which will provide customer from quality and quantity of the product till the expiry date of the product.

We analysis thing according to our website is includes user login and products lists, price, order placing, delivery date of product and one of the easy things is category wise products. We stored customer information, an ordering or billing in database. We try to update our website product list when it is possible. We come up with an involve idea or experience of shop. It gives the ability for the customer's to purchase product at any location in Chhatrapati Sambhajanagar in Maharashtra. There will be increasing use of smartphones is also considered as a motivation.

Settings the storage limit on the basis of weekly and monthly orders. Feedback will increase the quality of shop. Customer can order product online and save their time of shopping. So, storing customer feedback for acknowledge repeat clients and give them experience through greetings which will keep them coming back and ordered products again and again.[4]

II. LITERATURE REVIEW

We search so many topics and then we decided to choose this topic is best for everyone means team member and also best for shop admin and customer. There are many websites and apps are available related to online shopping on browser and play-store, but related to our city there are some websites or apps are available. It helps to manage or analyze data minutely and research how many people login or take away. This website also helps shop owners know about the kind of product people want.

III. OBJECTIVES

A. Reduces the time:

In this website all work is done by computerizing system. Customer can order product online, and billing is also online. Shop website is used to save time, manage shop quickly in less time. We manage the shop more effectively and easily by online ordering, billing and inventory control.

B. User-friendly:

This website is easy to use, easy to order the products and get easily delivery of the product. It is a best processing of payment and we also learn some better things from customer's reviews or feedback.

C. Save paper work:

This website saves the paper work, in this website there is no need of papers because all work is done by computerizing system and users all data and login information is stored in database. All things are based on internet and all developed countries system and website is goes with internet.

D. Safe and secure Vdata:

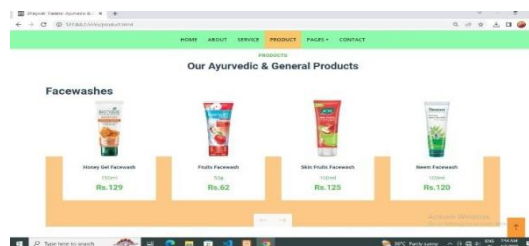

This website is safe for customer, we secure the customer information and all the data in database. We provide data security to payments cards and cyber security provides to user data or information.

IV.SCREENSHOTS OF THE PROJECT

This are some screen shots of our project. Home page and login form and database and product list is also showing. When user fill up the login form then their information is stored in database.
